## TERMS

ALL GOODS ARE SOLD F. O. B. CARS FACTORY, and shipments in transit are at purchasers' risk.

Prices are subject to change without notice, and all invoices will be rendered in keeping with conditions under which orders are acknowledged and accepted.

Invoices are payable at Net in thirty days in New York or Boston Funds or a cash discount of Two per cent. may be taken if settled within ten days from date rendered.

All Remittances should be mailed to Southington, Conn.

Unless error has been made by us in manufacturing or shipping an order, we cannot accept the return of goods until definite terms for such return have been mutually agreed upon.

All weights shown in this catalogue are approximate shipping weights.

Each page clearly designates where each item is made—whether in the Southington, Conn., plant or the Cleveland, Ohio, plant.

## GUARANTEE

Every tool bearing the PEXTO oval is of the highest quality, and thoroughly inspected before shipment. It is guaranteed to perform the work for which it is designed and intended to be used. Therefore, should any defect of workmanship or material develop in a tool which has been properly used, please return it to us for examination and free replacement.

## INTRODUCTORY

**I**N presenting to the hardware trade this Centennial Edition of the PEXTO catalogue covering the largest line of Mechanics' Hand Tools, Builders' and General Hardware manufactured by any one Company, no time, effort or expense has been spared to produce a comprehensive book which would not only be a fitting representative of The Peck, Stow & Wilcox Company covering tools and hardware manufactured continuously since 1819, but also one which hardware buyers may find an indispensable daily help in providing for their requirements covering the list of PEXTO products.

In contrast with previous issues, we have followed closely the present-day idea of concentrating illustrations and descriptions into a double column book, with the advantage of carrying quickly and concisely to the mind of the reader the essential details of the goods catalogued. Also the further benefit of keeping each separate section or line—such as Braces, Chisels, Pliers, Wrenches, Snips, etc.—within as few pages as possible, consistent with the adequate listing of the individual pieces.

In reviewing this catalogue, do not overlook the many advantages which the PEXTO lines offer to you by enabling you to concentrate your purchasing power over a large line of goods instead of spreading it over a number of scattered factories. These advantages are many, and principally because it enables you to establish a large account with one reliable, leading manufacturer, which makes it possible to extend to you from time to time considerations of value to you—not only in making up full freight shipments with relatively limited quantities of various items, but from other angles, such as frequent shipments, having enough goods to go out in each shipment to earn maximum freight allowance, etc.

It will be our pleasure to go over this with you further in detail, because what this concentrated purchasing idea is accomplishing for many of the largest buyers in the country, it can also do for every purchaser of the large lines necessary to the average hardware stock.

## LABELS

Another wonderful PEXTO dealer help is the new PEXTO label de luxe.

PEXTO Hardware is packed under this four-color label, which was designed by an eminent artist, so as to show clearly at a glance the necessary details of a good label; namely, the item, the number and the size.

Our adoption of this label — was to give both the jobber's stock man and the retail clerk a label which would eliminate errors, save time and make it a pleasure for him to handle the goods.

## Sheet Metal Workers' Manual

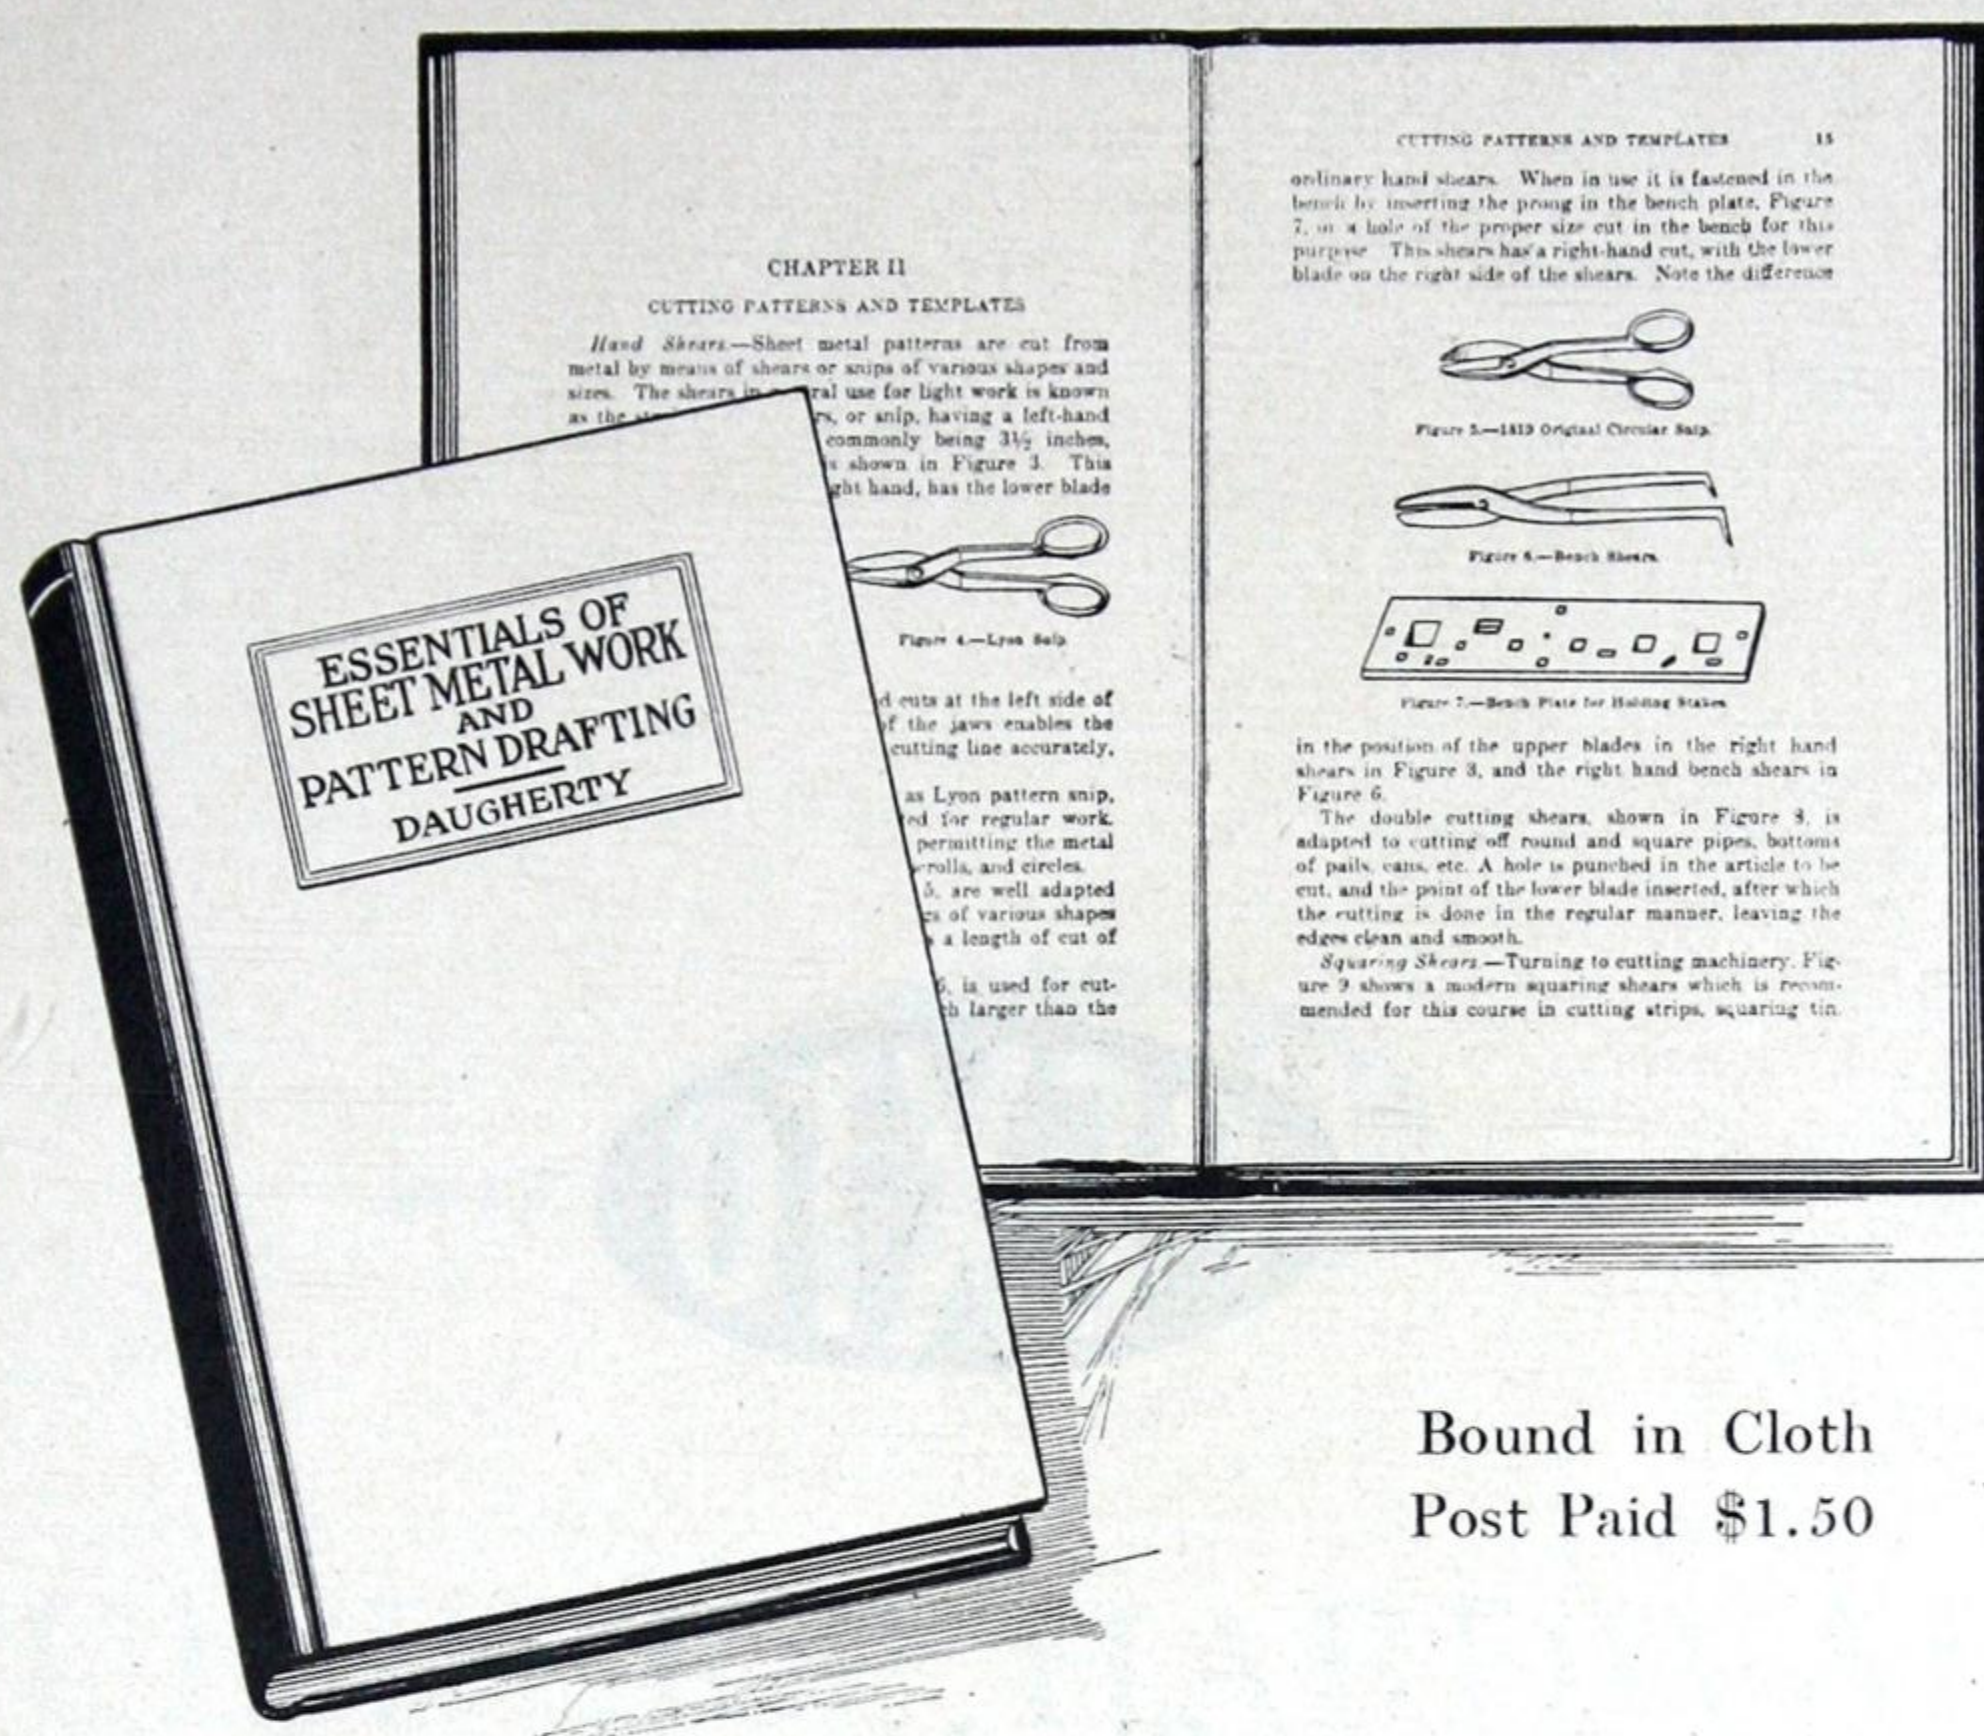

Mr. L. Broemel, for many years active with The Peck, Stow & Wilcox Co., foremost manufacturers of sheet metal working machinery, and Professor J. S. Daugherty, Instructor in Sheet Metal Work in the School of Applied Industries, Carnegie Institute of Technology, Pittsburgh, Pa., are the principal writers, with contributions from the Federal Board for Vocational Education, Washington, D. C., and manufacturers well known in the industrial field and prominent in the sheet metal industry.

Pattern drafting is a big feature of this book, but most important, the pattern secured, it shows how to develop the work with modern machines and tools and such other mechanical appliances as are used. How to perfect all manner of seams and joints in sheet metal work is fully illustrated. A thorough course, fully illustrated, is given in the processes of soldering, brazing, oxy-acetylene welding, electric welding, and hand forging and welding. Crimping, beading, edging, folding, turning, wiring, straight, circular and irregular cutting are operations that enter into sheet metal construction extensively and these operations are described and illustrated in order. A whole chapter is given up to the importance of the sheet metal industry and to sheet metal working machine and tool construction, their application and uses, describing their adjusting features with every important feature of each machine marked according to trade terms used—valuable information for the buyer as well as for the operator.

Over four hundred illustrations are reproduced from actual drawings and photographs and each subject is described in as practical and non-technical manner as possible.

Distributed by The Peck, Stow & Wilcox Company, Southington, Conn.

Bound in Cloth  
Post Paid \$1.50

# Essentials of Sheet Metal Work and Pattern Drafting

*By James S. Daugherty*

Instructor in Sheet Metal Work, School of Applied Industries, Carnegie  
Institute of Technology, Pittsburgh.

An authoritative course in practical sheet metal work and pattern drafting in text form for industrial teachers, students, apprentices, sheet metal workers and others interested in this subject.

The course is outlined and the problems are presented in such sequence that the processes and machine operations are reviewed with each new problem. In presenting these problems, the author has followed the lines of the best shop methods, derived from years of experience in teaching the subject and as a practical sheet metal worker.

The book tells how to transfer patterns to metal; how to cut patterns and templates; explains the process of seaming; treats of the various processes used in the construction of conductor pipes, stove pipe, furnace pipe and air ducts. It teaches radial and parallel line development; shows how to make pipe intersection, tee joints, elbows, and the various other forms of construction with which the sheet metal worker must be familiar.

Distributed by The Peck, Stow & Wilcox Company, Southington, Conn.

## BUILDERS' HARDWARE

**T**HE following pages illustrate and describe a very attractive line of Mortise Lock Sets, Rim Lock Sets, Door Knobs, and other Hardware Trimmings, for houses, also various items of Shelf Hardware.

These goods are artistically designed, substantially constructed and highly finished, to give the very best of satisfaction, the same quality and earnestness is built into them as in PEXTO Tools.

# A Valuable Book of Standards

For Architects—Contractors, Builders  
Sash and Door Manufacturers

Thomas F. Nolan, F. A. I. A., Professor of Architectural Construction,  
University of Pennsylvania says:

“As chairman of the Committee on Materials and Methods of The  
American Institute of Architecture, I am glad to have this opportunity of  
expressing approval of this much desired publication.”

This new book is now ready for distribution. It is a substantially bound,  
64-page volume, profusely illustrated. Its pages are devoted to specific  
requirements as they relate to Builders' Hardware and Locks. All the stand-  
ards of size and spacing recently recognized by Architects and the trade  
generally are fully covered. The book deals with fixed dimensions only — it is  
not intended to suggest any architectural or constructional design.

To obtain this volume write to

**Builders' Hardware Service Bureau**  
No. 2 Rector Street, New York City

# The Rehardware Department

## WHERE PROFITS MULTIPLY

The biggest market for builders' hardware is not in hardwaring new buildings. Big as that market has been, there's a bigger and more profitable one in rehardwaring old buildings. Think of the hundreds of buildings in your town that need new locks, new clasps, new catches, new hardware all through — and the stores that could be improved by new hardware on their front doors, just as they are improved by new decorations.

Do you know that 60% of the door locks in your town can be picked with a button hook? Just look to your own locks and bring this big idea right home to yourself. Think of the redecorating jobs around your town that would be 100% better if new hardware had been installed at the same time.

## THIS BIG MARKET IS RIGHT AT YOUR DOOR

It's as close to you as your nearest neighbor — as big as your town. Every time you open or shut a door in a house, a dozen years old — yes, in some houses half a dozen years old — you are standing on the threshold of this big rehardwaring market that is growing bigger all the while. It can be made to yield a steady profit month after month, and year after year, if you will go after it.

## OWN YOUR OWN REHARDWARE DEPARTMENT

Start a Rehardware Department of your own. Check over your stock and be sure that everything is ship-shape to get into this big field on the right basis — with Pexto Hardware.

## HERE ARE SOME SUGGESTIONS

Show your customers that old locks are dangerous; that hardware won't last forever; that every old lock about the house should be inspected, and

worn-out locks replaced for protection.

Teach them to consider rehardwaring as necessary as redecorating. Show them how new hardware enhances the appearance and increases value of property. Tell them how easy it is to do the work. Show the householder that he can himself replace old designs with new ones that entirely cover up the markings of the old patterns.

People don't think of these things. It's up to you to tell them.

SHOWER, DRESSING

SHOWER, DRESSING  
 This fixture is designed for use in a shower or dressing room. It consists of a vertical rectangular frame with ornate top and bottom sections. Inside the frame, there are two circular components: a smaller one at the top and a larger one below it. To the left of the frame is a horizontal bar with several small rectangular protrusions. Below the main frame, a key is shown, likely for the locking mechanism.
